

CS3513 RPAL Lab Practical - RPAL Programming Language

You need to write RPAL Programs for the below tasks.

1. Program to check whether the given number is positive or negative
2. Program to find greatest of three numbers
3. Program to print Fibonacci series in a given range
4. Program to find factorial of a given number
5. Program to check if given number is palindrome or not
6. Program to display palindrome numbers in a given range
7. Program to check if number is odd or even
8. Program to find sum of first n numbers

Please submit a .zip file, containing eight .txt files for the above 8 tasks. File names should be 1.txt, 2.txt ... 8.txt where 1.txt will have the answer for task 1 and so on.

You can use the RPAL Interpreter given in the Moodle page to test your programs. Some samples programs are also available in the RPAL Interpreter folder for your reference.

Note: You cannot give dynamic user inputs to RPAL program. So the input should be pre coded inside the program as in the examples.
